

How to do...

Preparing today for tomorrow

Water-based Lacquer Care for the regular maintenance of lacquered surfaces

Lacquer Care strengthens the lacquer, as it protects against wear and scratches and hereby prolongs the lifetime of the lacquered surface.

Lacquer Care does not build up a thick layer on the floor surface as the old layer is renewed with the next application.

Clean

Mix Wood Cleaner with water in the ratio 1:10. Wash the floor thoroughly till the surface is completely clean. The floor must be absolutely dry before application of Lacquer Care.

Tip: Always work with two buckets - one with Wood Cleaner mixed with water and one with clear rinse water.

Apply

Apply a thin coat of the concentrated Lacquer Care. If dirty, rinse the cloth/mop in the clear water and wring it hard. Continue the application. Do not continue application of Lacquer Care when the floor has started to dry. Leave the surface to dry for approx. 30 minutes.

Regular cleaning of lacquered wood floors

Lacquer Soap is for regular cleaning of lacquered or painted surfaces and for surfaces of vinyl, floor tiles, linoleum, laminate etc. Lacquer Soap does not build a soap film and is therefore ideal for surfaces requiring frequent cleaning.

Always work with two buckets - one with Lacquer Soap mixed with water and one with rinse clear water.

Mix 125 ml Lacquer Soap with 5 l water for the regular cleaning. Wash the floor lengthwise. It is recommend-able to work with two buckets - one with rinse water for the wringing out of the mop and another one with the soap solution.

It is recommendable to use as little water as possible for the cleaning and make sure that no water is left on the surface after cleaning.

Please notice! Particularly dirty floors or stubborn stains may be removed with Wood Cleaner or Spot Remover.
